Class Exercise 1

Please submit a PDF version of your answer to the Canvas platform by the deadline (11th Oct 2026 11:59 pm). Please also fill in the survey form in the Canvas platform.

Task 1

Based on the note-taking app exercise discussed in week 4, use the coding agent to implement the translation feature (integrate with an LLM service such as DeepSeek in OpenRouter). Refactor the app to use Supabase as the database. Deploy your app to Vercel and test that it works. Make your app publicly available in Vercel with the link. Provide the link to your app and capture a screen capture of your app with the translation feature.

Note: To make your app public, in your project in https://vercel.com , select Deployment Protection. Turn off "Require log in".

Task 2

a) Watch the following video about Scrum

https://www.youtube.com/watch?v=vxpKA9UuM1w

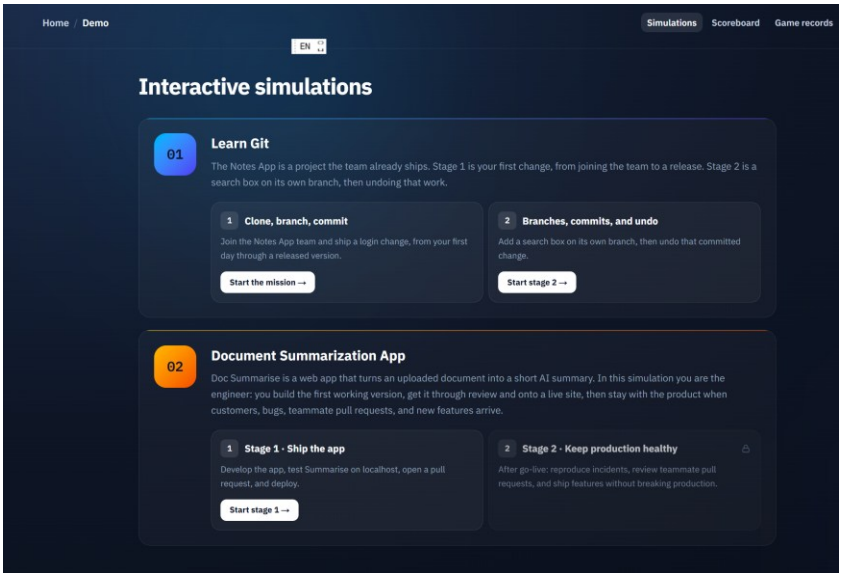

The Scrum Game (https://scrumgame.vl.comp.polyu.edu.hk) is a simulation game we developed in 2019 to introduce Scrum in an interactive way.

Try the game for at least TWO sprints and answer the following questions.

What happens during and after the execution of sprint 1 and sprint 2? What decisions have you made? Explain with screenshots from the game

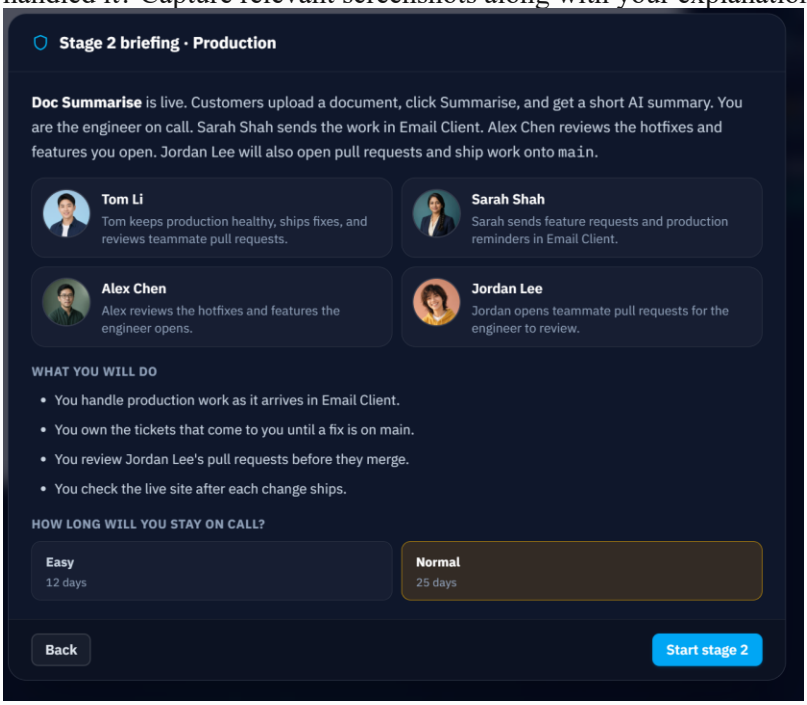

b) Try the software development interactive simulation app that I have developed (default username and password are
[your student id]@connect.polyu.hk. You can change your password after logging in.

https://interactive-apps-seven.vercel.app/

i) Try stage 1 in the Document Summarization App mission. What were the main steps in developing the app and deploying it to production? For each main step, say what you did and what the game showed. Capture a screenshot of the main step.

ii) Complete the normal mode in stage 2 (unlocked after you completed stage 1) in the Document Summarization App mission. After the app is in production, document incidents affecting the live product. For each incident, what were the main steps you took, and what happened as you handled it? Capture relevant screenshots along with your explanation.

Remark: You may first try the easy mode to get familiarized with the UI and game mechanics.
